CME 7
Inflammation & Infection + Paediatrics Committee
Monday, October 19, 14:30-16:00

Session Title
Nuclear Medicine in Paediatric Infections

Chairpersons
André Dias (Aarhus, Denmark)
Ana Isabel Santos (Almada, Portugal)

Programme
14:30 - 15:00  Gregorio Paolo Milani (Milan, Italy): Clinical Perspective From a Paediatrician About Paediatric Infections

15:00 - 15:30  Diego de Palma (Varese, Italy): Conventional NM in Paediatric Infections

15:30 - 16:00  Meg Parisi (Seattle, United States of America): PET and Fever of Unknown Origin in the Child

Educational Objectives
1. A overview the causes and clinical presentation of a child with infection
2. A overview of conventional NM indications for the child with infection
3. A review of the indications of FDG PET for the child presenting with fever

Summary
A review session regarding the uses of Nuclear Medicine techniques to evaluate the infected child. Starting with a clinical perspective from a paediatrician, and later evaluating both conventional nuclear medicine methods, as well as FDG PET/CT in the child with fever.

Key Words
Infections, Pediatric, FDG, Fever
